Achieving Financial Sustainability & Meeting Low-No Grant Expectations with Propane Autogas

Stephen Whaley
Propane Education & Research Council

Agenda:

- Steve Whaley - Propane in Transit Overview

- Ryan Zic – ROUSH CleanTech Vehicle Solutions

- Mike Whitten– Manchester Transit Authority, New Hampshire

- Daniel Whitehouse – SMART, Detroit, Michigan

- Jill Drury – Charlevoix County Transit – Grant Opportunities

Successful Alternative Energy Adoption

What Makes an Alternative Energy Adoption Successful?

- Reduced emissions without increasing cost or losing efficiency.
- TCO reduction or ROI realized before the end of the lifecycle.
- Similar (or better) performance than the original fuel without compromising range.
- High-volume supply of energy domestically sourced.

Path to Zero Emissions

Path to Zero

- Particulate Matter
 - Virtually zero
- NOX
 - 96% reduction from best in class diesel
 - Certifying to .02, operating at 0.01, full duty cycle
- GHG
 - New technologies 25% reduction from next best technology

96%

NOx REDUCTION VERSUS CLEAN DIESEL BUS

Duty cycle: Low speed, stop-and-go route

Source: 2018 West Virginia University study, comparing 2015 LPG Blue Bird school bus (6.8L, 10 Cylinder) with 2014 ultra-low sulfur diesel Blue Bird school bus (6.7L, 6 cylinder).

PROPANE.COM

Total Carbon Intensity of the U.S. Grid = 130

Extraction

Electricity is not naturally occurring, so it must be produced using other resources like gas, coal, or nuclear.

approximately 9.9% CO₂ eq emissions

Carbon intensity contribution:

13.6 g/MJ

Generation

Power plant generates electricity.

Transformer steps up voltage for transmission.

approximately 75.6% CO₂ eq emissions

Carbon intensity contribution:

110.8 g/MJ

Transmission & Distribution

The transmission lines carry electricity to transformers, which step down voltage. Electricity is delivered to the charging location.

approximately 4.5% CO₂ eq emissions

Carbon intensity contribution:

5.2 g/MJ

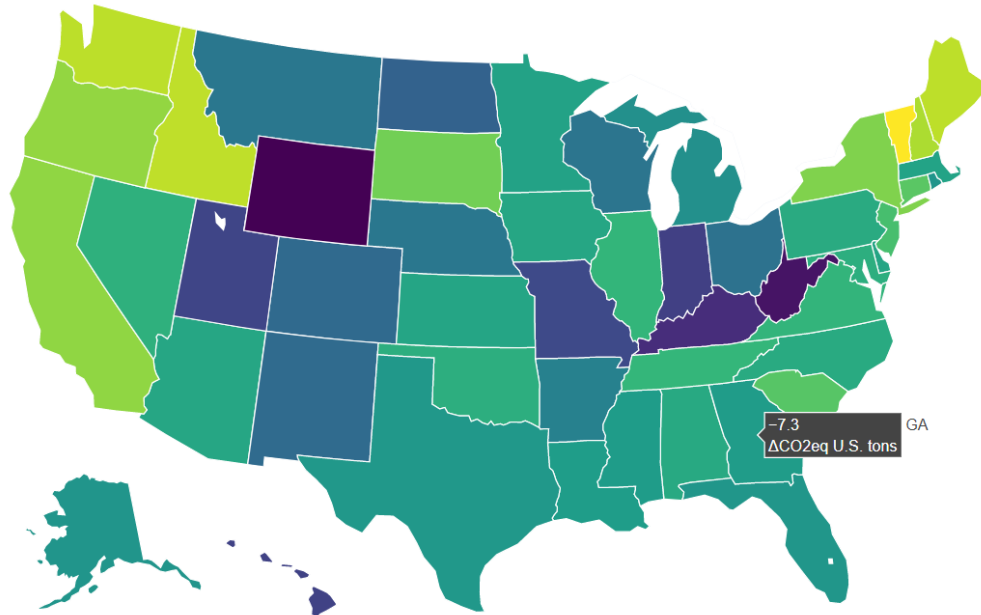

Well-to-Wheels Carbon Intensity Comparisons of “Fuel” (gCO₂_{eq}/MJ)

What is Propane Autogas?

- Affordable, Clean, American-Made Fuel
 - C₃H₈
 - Byproduct of natural gas processing.
 - 100% Domestic
 - Commonly used for space and water heating, cooking, and as engine fuel.
- Using Propane
 - 48 million Households
 - 900,000 Farms
 - 600,000 Forklifts
 - 25,000 Commercial Mowers
- Production
 - US produces more propane than any country in the world
 - 30 billion gallons/year
 - 20 billion exported/year

What is Propane?

- Liquid state below minus 42 degrees Fahrenheit
- 100 PSI at 60-degree ambient temperature
- Heavier than air
 - No expensive ventilation systems needed for maintenance facilities

What is Propane?

Low Carbon – Hydrogen Rich Energy

Propane comes from organic as well as renewable sources.

It's nontoxic, meaning it does not contaminate air, soil, or water resources.

Current Autogas Vehicle Offerings

OEM Propane Options

- Light & medium duty Ford trucks & vans, school bus.
- Factory Ford warranty maintained.
- No loss of HP / torque / towing capacity.
- Serviceable with existing diagnostic equipment.
- EPA & CARB Certified.

High Growth Vehicle Markets

EMERGING MARKETS

Parcel/Package

- USPS has 92,000 routes for moving mail.
 - **Over 70,000 routes are performed by independent contractors.**
- There are approximately 10,000 class 6-7 straight box trucks operated by USPS contractors.
- Contractors bidding on USPS routes score higher with alternative fuel vehicles.
- 1,000 gallons/month average fuel consumption.

USPS Contractors

USPS Contractors

“Win – Win! We need more of these financial and environmental success stories.”

Jennifer Biero-Reveille
Chief Sustainability Officer, US Postal Service

EMERGING MARKETS

Food/Beverage

- Major companies have already validated propane autogas in this market.
 - ReadyRefresh by Nestlé Waters.
 - Schwan's Home Delivery.

Beverage – Shock Top & Ready Refresh

Beverage - Canada Dry (Pepsi Distributor)

EMERGING MARKETS

Paratransit

- 51,000 paratransit vehicles nationwide.
- 600 gallons per month average fuel consumption.
- ADA requires every county in the U.S. to provide service.

Shuttle Buses

San Diego Metropolitan Transit System

Industry: Paratransit

Location: San Diego, CA

Vehicles: 101 Ford F-550 / E-450 Buses

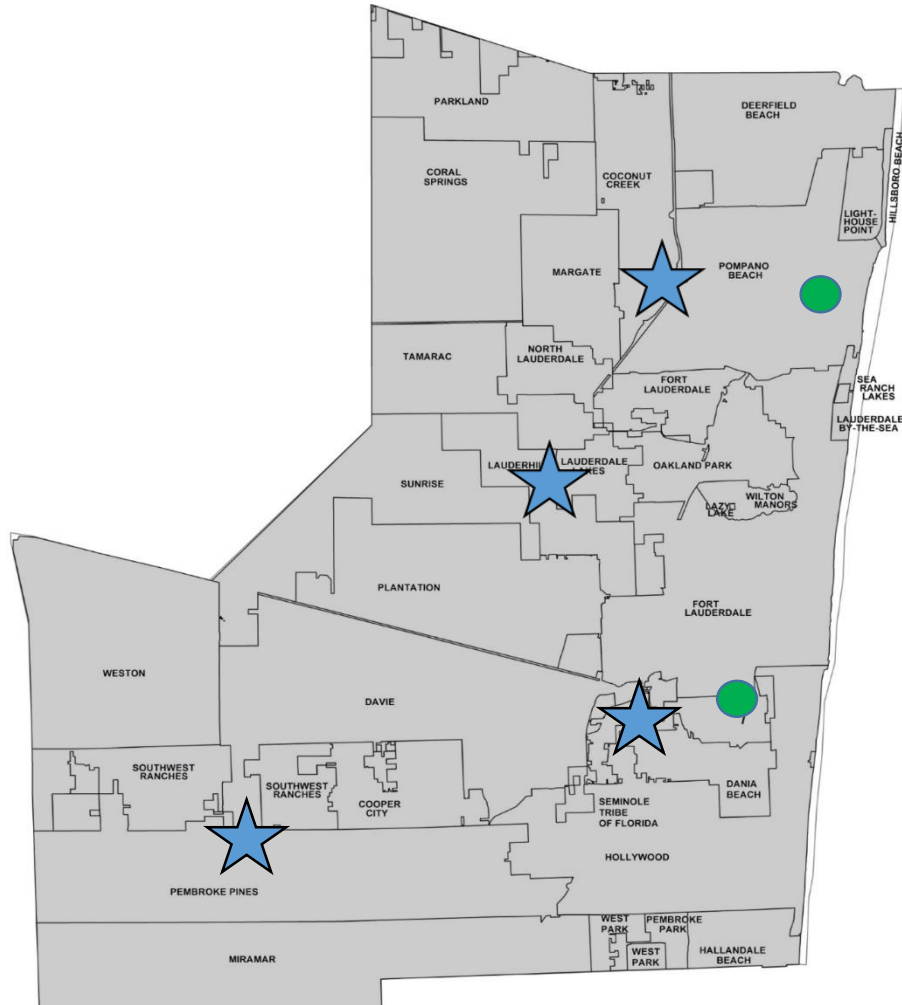

By The Numbers:

- Reduce emissions by **2 million pounds** per year.
- Will save **\$5.8 million** over lifecycle of vehicles.
- Reported **\$9,740 in savings annua**
- Reduce carbon intensity by **71%**.

Propane Autogas - Consideration

Propane Facts:

- 30B gallons produced annually in U.S.
- 20B exported
- Biproduct of many activities

Propane Maintenance

Fuel filtration is the only unique maintenance item

Cherokee County Area Transit – GA

- **Received 85% funding** from Federal Transit Administration for a propane bus.
 - **Propane meets FTA's green initiatives**
- **Obtained 90% funding** from the Federal Transit Administration for a propane fueling station.
 - **Propane meets FTA's green initiatives**
- **Saved \$10,000 per propane vehicle** compared to same model gasoline vehicle.
 - **Higher FTA funding and propane supplier funding.**
- Locked in 3-year fuel price agreement with propane provider at a **50% saving per gallon** over gasoline

ROUSH 7.3L Propane - Emissions

Emission Constituent	ROUSH 2023e 7.3 LPG
NOx (Nitrogen Oxides)	0.02
HCHO (Formaldehyde)	0.001
PM (Particulate Matter)	0.002
NMHC (Non-Methane Hydrocarbons)	.04
CO (Carbon Monoxide)	5.0
Greenhouse Gas Emissions	
GHG Carbon Dioxide (CO ₂)	544
GHG Methane (CH ₄)	0.03
GHG Nitrous Oxide (N ₂ O)	0.02

- Approximate average: 70% cleaner than federal emission standards
- Meaningful impact now, without the need for grant funding

BLUE BIRD

SAFETY

System Layout and Function

Fuel Rail Pressure Control Module

- Supply solenoid on the FRPCM
- Check valve on FRPCM return line

Tank Check Valves

- Fill valve is back checked
- Return valve is back checked

Supply Valve Shut-offs

- Electronic solenoid shut-off
- Manual shut-off valve
- Excess flow check valve

Propane Safety

- LPG is as safe as any conventional engine fuel.
 - Propane is a nontoxic, non carcinogenic, and noncorrosive fuel.
 - It poses no harm to groundwater, surface water, or soil.
- Fuel tanks are 20 times more puncture resistant than gasoline.
 - Ductile steel tanks about 1/8" thick (varies slightly by tank diameter).
 - All fuel tanks are leak checked before installation.
- Colorless and odorless.
 - Ethyl mercaptan added for leak detection.

Ryan.Zic@roush.com

Our Propane Journey

Mike Whitten, Executive Director of MTA

Brief MTA Background

- Directly operate MB, DR, Para, IEB, DFR
- FY23 Annual Budget of just under \$10M
- Also directly operate school, charter, wedding, & livery
- Small urban system

The Planning Process

We wanted to reduce our Carbon footprint but how?

- MTA had switched to B-20 biodiesel in 2010 but by 2015 we were looking to take the next step.
- Electric vehicles weren't operationally where we needed them to be in terms of range, charge time, and cold weather operations
- CNG required huge investments in rolling stock and facility upgrades that we didn't have \$\$ for.
- Propane was cleaner, cheaper, and seemed like a perfect fit.
- We chose to start on our school fleet to avoid FTA procurement requirements that may have limited our ability to find the best vehicle type for our community.

Rolling Stock & Infrastructure

Vehicle Selection

- Visited all three major school bus manufacturers in person to see entire process
- Visited Roush during the CTAA Expo in Detroit in 2018
- Released an RFP that ultimately was awarded to Bluebird

Fueling Infrastructure

- Partnered with a local provider called Dead River
- Dead River installed two 1,000 gallon above ground tanks and a fuel pump at no cost to MTA
- MTA entered 3 year contract for propane with Dead River

Facility Impacts

- Minimal costs, we are installing vapor detectors in the storage bay and maintenance
- Fans at ground level since Propane is heavier than air
- We don't store overnight in maintenance

FREE DOWNTOWN AREA SHUTTLE

PROPANE POWERED

THE GREEN DASH

MTABUS.ORG

ROUSH

Propane Autogas Fuel Pumps

How's it worked out?

Great! We ordered 14 school buses initially and have since added 5 more last year and 4 more in 2023 so we're up to 23 out of a fleet of 45. Funded initially via VW settlement funds.

In 2023 we added our first two transit cutaways.

No winter issues or maintenance problems so far.

SMART

PROPANE PROGRAM
2023

Daniel Whitehouse
Vice President of Paratransit and On-Demand Services

SMART Service Area

SMART Service Area Today

- SMART provides service in Wayne, Oakland, and Macomb Counties.
- The SMART service area covers 2,100 square miles.

SMART Propane Fleet History

- 2015 SMART placed 61 propane vehicles in service
- 2016 SMART placed 13 propane vehicles in service
- 2018 SMART placed 22 propane vehicles in service
- 2019 SMART placed 25 propane vehicles in service
- 2023 SMART is replacing 40 propane vehicles which were placed into service in 2015.
- 2023 SMART is replacing 20 propane vehicles with transit vans.
- SMART operates 121 propane vehicles directly. Currently all directly operated para-transit vehicles are fueled by propane.
- SMART partners operate 4 additional propane vehicles.

SMART Propane Change

- Maintenance savings. With an engine similar to a gas engine, replacement parts are cheaper and, in many cases, easier to repair than diesel.
- Regen issues are gone after switching from diesel to propane which allows vehicles to be on the road more.

SMART Costs

- Fuel cost savings. SMART spends roughly \$0.87 per gallon for propane compared to \$2.67 per gallon for diesel.
- FY2021 Miles 2,603,687 miles driven at \$0.87 = \$2,265,207 using propane vs \$6,951,844 using diesel. The savings in FY21 is \$4,686,637 by using propane.
- FY2022 Miles 2,996,516 miles driven at \$0.87 = \$2,606,968 using propane vs \$8,000,697 using diesel. The savings in FY22 was \$5,393,729 by using propane

SMART Propane Lessons Learned

- 2015 series of vehicles had a 40-gallon propane tank. This allowed the vehicle to be on the road for half a day before refueling. This has major impacts to our operations.
- Subsequent fleets in 2016, 2018, 2019, and 2023 have a 60-gallon tank which in nearly all cases allows the vehicle to stay on the road for an entire 8 or even 10 hour shift.

Low or No Emissions Competitive	\$1,121.56	\$1,123.06	\$1,124.96	\$1,126.51	\$1,128.46
5339 Program TOTAL	\$2,101.25	\$2,123.21	\$2,151.23	\$2,173.98	\$2,202.56

Please Note: Funding amounts before subtracting administrative and oversight takedown.

2023 Low-No & Buses and Bus Facilities Competition

Available Funding: Approximately **\$1.7 billion**

- Buses and Bus Facilities Competitive: Approximately \$469 million
- Low or No Emissions: \$1.22 billion (**\$357 million for low emission projects***)

Important Dates	
Notice of Funding Opportunity	January 27, 2023
Applications Due	11:59pm EST April 13, 2023
Project Evaluations	April – May 2023
Award Announcement	No Later than June 28, 2023
Pre-Award Authority	Starts on date of project announcement
Available for Obligation	The year of award plus 3 years – September 30, 2026

**Please note: Due to less funding being requested than was available for low-emission projects in 2022, this amount includes approximately \$69 million in FY22 funds reserved for low-emission projects as required by statute.*

Low Emission Set Aside – 25 Percent

- As required by Federal public transportation law ([49 U.S.C. 5339\(c\)\(5\)](#)), a minimum of 25 percent of the amount awarded under the Low-No Program will be awarded to **low-emission projects** other than zero-emission vehicles and related facilities.
- \$69,192,987 of FY 2022 funding for low-emission projects remains available, in addition to the \$287,920,295 available for FY 2023 – totaling **\$357,113,282** total in available funds for low emission projects in 2023.
- Eligible projects include (but not limited to):
 - Hybrid Electric / Gas or Hybrid Electric /Diesel Buses
 - Compressed Natural Gas or Liquefied Natural Gas Buses
 - Ethanol, Propane, and Other Alternative Fuel Buses
 - Constructing or Leasing Facilities Specifically for Low Emission Buses
 - Rehabilitating / Improving Existing Public Facilities to Accommodate Low Emission Buses

Additional Savings

Alternative Fuel Excise Tax Credit

A tax incentive is available for alternative fuel that is sold for use or used as a fuel to operate a motor vehicle. A tax credit in the amount of \$0.36 per gallon* is available for propane. For more information about claiming the credit, see IRS Form 4136, which is available on the [IRS Forms and Publications](#) website.

NOTE: This incentive was originally set to expire on December 31, 2021, but has been extended through December 31, 2024, by Public Law 117-169.

Rebates & Incentives

Many State Propane Associations and Fuel Vendors provide incentives and rebates when purchases or retrofitting vehicles.
